Lord Abbett mutual fund shares are distributed by Lord Abbett Distributor LLC.

**Lord, Abbett & Co. LLC**  
**Lord Abbett Distributor LLC**  
90 Hudson Street, Jersey City, NJ 07302-3973

This presentation has been prepared exclusively for use by analysts, institutional investors and their consultants, registered investment advisors, broker-dealers and sponsors of plans with a minimum of 100 participants. It is not intended for, and should not be used with, small plan sponsors, plan participants, or the public in written or oral form or for any other purpose.

## AT A GLANCE

- Independent, privately held firm
- 54 partners
- Assets under management: \$169.3 billion\*
- 164 investment professionals with an average of 17 years of industry experience

## INVESTMENT-LED. INVESTOR-FOCUSED.

### OUR FIRM

A singular focus on the management of money since 1929

### OUR MISSION

Delivering superior long-term investment performance and a client experience that exceeds expectations

### OUR DIFFERENTIATORS

- Independent Perspective
- Commitment to Active Management
- Intelligent Product Design

Data as of 09/30/2018.

\*Includes approximately \$1.6 billion for which Lord Abbett provides investment models to managed account sponsors.

# FLOATING RATE BANK LOANS

Floating rate bank loans represent a type of corporate debt that is

- Senior to bonds
- Secured by assets
- Floating rate rather than fixed rate

## LOAN COUPONS ADJUST WITH LIBOR; LIBOR FOLLOWS FED FUNDS RATE (1992 – 2018)

As of 09/30/2018.

Source: Credit Suisse and Bloomberg.

**Past performance is not a reliable indicator or guarantee of future results.** For illustrative purposes only, and does not represent any specific portfolio managed by Lord Abbett or an particular investment.

# U.S. LOANS: POSITIVE HISTORICAL RETURNS THROUGH VARYING MARKETS

## CALENDAR YEAR RETURNS (AS OF 09/30/2018)

Historically, the floating-rate loans have delivered:

- Positive annual calendar-year returns for 24 of the past 26 years
- Only 14 calendar quarters with negative returns (out of 107)
- Only four quarters with returns below -2%.

Of course, senior floating-rate loans are speculative, and past performance is not a reliable indicator or guarantee of future results.

		1 Year	3 Years	5 Years	10 Years
<b>Short Duration Income Fund</b>	Net Asset Value: (without sales charge)	1.16%	2.20%	2.05%	4.16%
	Maximum Offering Price: (2.25% max sales charge)	-1.15%	1.43%	1.60%	3.92%
<b>Total Return Fund</b>	Net Asset Value: (without sales charge)	-1.24%	1.80%	2.40%	4.71%
	Maximum Offering Price: (2.25% max sales charge)	-3.47%	1.03%	1.93%	4.48%

**Short Duration Income Fund Expense Ratio: 0.59% ; Total Return Fund Expense Ratio: 0.67%**

**Without sales charge (NAV):** the net asset value performance above shows the Fund's average annual total returns excluding sales charges. If sales charges, including any applicable contingent deferred sales charge (CDSC) had been included, performance would have been lower.

**With sales charge (MOP):** performance of Class A shares with sales charge reflects the reinvestment of all distributions and includes initial maximum sales charge. Certain purchases of Class A shares without a sales charge are subject to CDSC. The CDSC is not reflected in the performance shown. Please see the prospectus for more details.

**The performance data quoted reflect past performance and are no guarantee of future results. Current performance may be higher or lower than the performance data quoted. The investment return and principal value of an investment in the Fund will fluctuate so that shares, on any given day or when redeemed, may be worth more or less than the original cost. You can obtain performance data current to the most recent month-end by calling Lord Abbett at 888-522-2388 or referring to lordabbett.com.**

# IMPORTANT PERFORMANCE AND OTHER INFORMATION

## **Morningstar Information**

The Morningstar Bank Loan Category has portfolios that primarily invest in floating-rate loans instead of bonds. In exchange for their credit risk, these loans offer high interest payments that typically float above a common short-term benchmark such as the London Interbank Offered Rate, or LIBOR.

Morningstar percentile rankings for the specified periods are relative to all funds that have the same investment categories. The highest (or most favorable) percentile rank is 1, and the lowest (or least favorable) percentile rank is 100.

## **Barron's Information**

Barron's, "Best Fund Families of 2017," March 10, 2018. Barron's rankings are based on asset-weighted returns in five categories — US equity funds; world equity funds; mixed equity funds; taxable bond funds; and tax-exempt funds. To be included for Lipper/Barron's Fund Survey, each fund in the survey must have had at least three funds in Lipper's general equity category, one world equity category, one mixed-asset, two taxable-bond funds and one national tax-exempt bond fund. Rankings also take into account an individual fund's performance within its Lipper peer universe. Each fund's return was measured against those of all funds in its Lipper category, resulting in a percentile ranking which was then weighted by asset size, relative to the fund family's other assets in its general classification. Lipper calculated each fund's net total return for the year ended December 31, 2017, minus the effects of 12b-1 fees and sales charges. Barron's Fund Family Rankings are awarded annually.

## Index Information

Indexes are unmanaged, do not reflect the deduction of fees or expenses, and an investor cannot invest directly in an index.

**The Bloomberg Barclays U.S. Government Bond Index** is a market value-weighted index composed of all publicly issued, nonconvertible, domestic debt of the U.S. government or any agency thereof, quasi-federal corporations, or corporate debt guaranteed by the U.S. government.

**The Bloomberg Barclays U.S. Aggregate Bond Index** is an index of U.S dollar-denominated, investment-grade U.S. government and corporate securities, and mortgage pass-through securities, and asset-backed securities.

**The Bloomberg Barclays U.S. Corporate Bond Index** includes all publicly held issued, fixed-rate, nonconvertible investment-grade corporate debt.

**The FTSE 10 Year Treasury Bond Index** is a broad measure of the performance of the medium-term U.S. Treasury securities.

**The Credit Suisse Leveraged Loan Index** is designed to mirror the investable universe of the U.S. dollar-denominated leveraged loan market.

**The Credit Suisse High Yield Index** is an unmanaged, trader-priced index constructed to mirror the characteristics of the high-yield market.

**The S&P 500® Index** is widely regarded as the standard for measuring large cap U.S. stock market performance .

**Performance data quoted is historical. Past performance is no guarantee of future results. Current performance may be higher or lower than the performance data quoted. The investment return and principal value of an investment in any fund will fluctuate as the prices of the individual securities in which they invest fluctuate, so that shares, when redeemed, may be worth more or less than their original cost. Different investments carry different risk.**

# IMPORTANT PERFORMANCE AND OTHER INFORMATION

## A Note about Risk

**Floating Rate Fund:** The Fund is subject to the general risks associated with investing in debt securities, including market, credit, liquidity, and interest rate risk. The value of investments in debt securities will fluctuate in response to market movements. When interest rates rise, the prices of debt securities are likely to decline, and when interest rates fall, the prices of debt securities tend to rise. The Fund may invest substantially in high yield, lower-rated securities. These securities carry increased risks of price volatility, illiquidity, and the possibility of default in the timely payment of interest and principal. Moreover, the specific collateral used to secure a loan may decline in value or become illiquid, which would adversely affect the loan's value. The Fund may invest in foreign or emerging market securities, which may be adversely affected by economic, political, or regulatory factors and subject to currency volatility and greater liquidity risk. The Fund may invest in derivatives, which are subject to greater liquidity, leverage, and counterparty risk. Certain of the Fund's derivative transactions may give rise to leverage risk. Leverage, including borrowing for investment purposes, may increase volatility in the Fund by magnifying the effect of changes in the value of the Fund's holdings. The use of leverage may cause investors in the Fund to lose more money in adverse environments than would have been the case in the absence of leverage. These factors may affect Fund performance.

**Total Return Fund:** The Fund is subject to the general risks associated with investing in debt securities, including market, credit, liquidity, and interest rate risk. The value of an investment in the Fund will change as interest rates fluctuate in response to market movements. When interest rates rise, the prices of debt securities are likely to decline, and when interest rates fall, the prices of debt securities tend to rise. The Fund may invest in high yield, lower-rated debt securities, sometimes called junk bonds and may involve greater risks than higher rated debt securities. These securities carry increased risks of price volatility, illiquidity, and the possibility of default in the timely payment of interest and principal. The Fund may invest in foreign or emerging market securities, which may be adversely affected by economic, political, or regulatory factors and subject to currency volatility and greater liquidity risk. The Fund may invest in derivatives, which are subject to greater liquidity, leverage, and counterparty risk. These factors can affect Fund performance.

**Short Duration Income Fund:** The Fund is subject to the general risks associated with investing in debt securities, including market, credit, liquidity, and interest rate risk. The value of an investment will change as interest rates fluctuate and in response to market movements. When interest rates fall, the prices of debt securities tend to rise, and when interest rates rise, the prices of debt securities are likely to decline. Debt securities are subject to credit risk, which is the risk that the issuer will fail to make timely payments of interest and principal to the Fund. The Fund may invest in high yield, lower-rated debt securities, sometimes called junk bonds and may involve greater risks than higher rated debt securities. These securities carry increased risks of price volatility, illiquidity, and the possibility of default in the timely payment of interest and principal. The Fund may invest in foreign or emerging market securities, which may be adversely affected by economic, political, or regulatory factors and subject to currency volatility and greater liquidity risk. The Fund may invest in derivatives, which are subject to greater liquidity, leverage, and counterparty risk. These factors can affect Fund performance.

Neither diversification nor asset allocation can guarantee a profit or protect against loss in declining markets.

## Glossary

**Treasuries** are debt securities issued by the U.S. government and secured by its full faith and credit. Income from Treasury securities is exempt from state and local taxes.

The **average yield** is the market-value-weighted average yield to maturity of a portfolio of bonds.

**Dividend yield** is a financial ratio that shows how much a mutual fund pays out in dividends each year relative to its Net Asset Value (NAV). The dividend yield is calculated by annualizing the last dividend and dividing it by the fund's NAV.

# IMPORTANT PERFORMANCE AND OTHER INFORMATION

The **30-day standardized yield** is an estimate of a mutual fund's net investment income measured over a 30-day period. It is expressed as an annual percentage rate using a method of calculation adopted by the Securities and Exchange Commission (SEC). In absence of the fee waiver, 30-day standardized yield would have been lower. Yields for other share classes will vary.

**Standard deviation** is a measure of volatility. Applied to an asset's return, it provides a measure of the range of those returns. A higher standard deviation means a greater range of returns.

**Duration** is a measure of the sensitivity of the price of a fixed-income asset to a change in interest rates and is expressed in years.

**Effective Duration** is the change in the value of a fixed-income security that will result from a 1% change in market interest rates.

**Yield to maturity** is the rate of return anticipated on a bond if held until it matures. Yield to maturity assumes all the coupon payments are reinvested at an interest rate that equals the yield-to-maturity. The yield to maturity is the long-term yield expressed as an annual rate.

**Correlation** is a statistical measure of how 2 securities move in relation to each other.
