CF-Inspector works by generating a **16 to 32 digit unique code** that can be applied on the product packaging. The number of unique codes that can be generated is nearly unlimited which ensures that every single unit will have a unique code specific to that very single product.

The generated code present on the packaging of unit can be used by the consumer to verify the authenticity and originality of product.

CF-Inspector offers vast range of mediums to verify the code which includes

-  SMS Message
-  Web Browser
-  Android Phones
-  Help Desk
-  Apple Phones
-  BlackBerry Phones
-  Windows Phones
-  Gaming Consoles

The consumer then receives a confirmation message which verifies the originality of the product. In addition to it consumer or Regulatory Authority can also Trace by knowing the Batch Number, Date of Manufacturing/Expiry, Region/Area manufactured for, Distributor name, Detail Specs or any other information.

CF-Inspector allows the operator to control the instances of verification of a single code after which the consumer will be informed about the non-originality of the product and previous instances of verification attempts of the code.

FEATURES

-  Anti-spam Filter (Web & SMS Module)
-  Blocked Sources (Web & SMS Module)
-  Tier-Architecture for better capacity building
-  Multi-User with access control
-  Highly Customized Web-based Reporting
-  Reliable response delivery
-  Hardware Independent
-  High Performance
-  Customizable Responses
-  Powerful event logging engine
-  Complete Privacy and Confidentiality of Data
-  Reliable 2D-Matrix/QR identification with any relevant Application
-  Powerful device Management
-  Message Counter
-  Message Broadcast
-  Customized Branding
-  Keys Expiry
-  32 Unique Key size 16-32 digits
-  Highly Customizable 2D-Matrix/QR Code printing with all printer types
-  Deactivation of vague keys
-  Data Integrity Check
-  Real-Time Web Administration
-  Customizable 2D-Matrix/QR Code settings
-  Export to multiple formats
-  Product-wise key generation with variable information like Product Identification Information, Batch Info, Serial Number, Mfg Date & Exp Date

-  This system is easy to deploy at manufacturing facility with existing infrastructure. It is most cost effective solution with high accuracy & security features.
-  This system doesn't need any specialized infrastructure setup / special readers for tracking and verification.
-  Flexible and scalable infrastructure can handle hundreds of millions of security labels.
-  Enables fast global deployments without requiring local data center build outs.
-  Ensures integrity of security labels with encryption technique that counterfeiters can't copy or predict.
-  Provides brand and anti-counterfeit managers intelligence on counterfeit activity through real-time analytics.
-  Protects brand and strengthens consumer loyalty.
-  Easily customizable to meet your needs.
-  Improves revenue by increasing sales of genuine products.
-  Enables to cross-promote related products at time of product verification.
